

Installation and Usage Manual - SlugChat - SlugChat

June 6, 2016

To install:

1. Clone our repo from the following github url: <https://github.com/ckyle93/SlugChat>
2. Insure you have Python3 installed- if you do not, install from here: <https://www.python.org/downloads/>
3. Install Django using 'pip3 install django==1.9.5'
4. Install Django Crispy forms via 'pip install django-crispy-forms'
5. Install Python client library Google API via "pip install --upgrade google-api-python-client"
6. Contact ckyle@ucsc.edu to get our Google API key so you can log in to our app.
Download Google API key and insert it into the project root directory 'SlugChat/'

To run:

1. Navigate into the root directory
2. Run python manage.py migrate
3. Run python manage.py runserver
4. Navigate to localhost:8000/ (NOT 127.0.0.1:8000, which won't work due to google login restrictions) to view your functional website

To use:

1. Slugchat is user friendly and will walk you through the steps needed for a user to link their google account and create a profile with the desired attributes and role (TA, Student, Professor)
