Working Prototype - SlugChat - SlugChat

https://github.com/ckyle93/SlugChat

Buglist

- You can enroll in your own class if you are a professor
- Comments only work for files that are one word, if you use more than one word with similar names it will comment on all names.
- When you comment and submit the comment, the text that was submitted stays and is not deleted.
- When building a profile or editing your profile you can add any field for picture and it does not check if it is an image
- Many features on the fileManager/ page do not work, the front-end was done but not the back, such as:
  - Quiz taking feature (appears as take a poll) is half working, not all the back-end is implemented, front-end is implemented
  - Select a PDF does not work either, it will not allow you to select a PDF
  - The PDF on the slide is static and does not really work
  - The chat feature does not get the channel variable so it does not go to the same place
  - Next slide buttons only work for the the static PDF
- We are unable to download video files. Uploading works correctly but downloading the file fails.
